12:30 – 1:30	Lunch
1:30 – 2:00	EPA Presentation on Climate Ready Utilities
2:00-3:00	Visioning Reporting
3:00-3:30	Closing Remarks

RUC seeks to bring together utilities, the water industry, professional organizations, and academia to develop strategies that will advance utility infrastructure resiliency efforts and provide essential value to its members and partners. The coalition's goal is to provide leadership in adapting utility operations to address the potential effects of climate change. The group seeks to enhance the usefulness of climate science by developing adaptation strategies and improving water management decision-making in the face of climate uncertainty.

The intent of our Visioning Workshop is to discuss RUC goals, prioritize issues, identify future topics of discussion, and collaborate with the partner utilities, academia, and professional organizations that embody RUC.
